

## Technical Data Sheet

### Areas of application:

Low-odour, transparent spray primer with fast initial adhesion, for pre-treatment of porous or mineral substrates, for optimised adhesion of all acrylic, butyl and bitumen-rubber adhesive tapes.

### Properties

Short flash-off time (varies according to substrate). With special nozzle, adjustable for 3 different application widths and heights, thus a targeted application is possible. Due to the fast flash-off time, correction is only possible for a short time.

Temperature, oil and water resistant.

### Technical Data

#### Chemical characterisation:

acrylate adhesive in aerosol

#### Colour:

transparent

#### Contents:

400 ml

#### Temperature resistance:

-25 °C to +70 °C

#### Storage:

cool and dry

#### Processing temperature:

For optimum application results, do not store or process at temperatures below +18 °C.

#### Directions for use:

The substrate must be even, solid, dry and free of grease, oil and dust. Shake can well before use. Spray the entire adhesive surface evenly with a thin film from a distance of approx. 20 cm and allow to flash off for approx. 3-5 minutes. Spray the can upside down empty after use.
